

Testing Overview

The HTML email was sent to a personal Gmail and Outlook account using hosted images (GitHub Pages).

RESULTS

Gmail Web (Chrome)

- Layout and images loaded correctly
- Basic CSS rendered
- Media queries limited
- Radio tabs did not work
- Keyframe animation did not run
- Hover effects not supported

Gmail Mobile

- Content readable
- Responsive behavior was inconsistent
- Radio tabs not supported
- Animation not supported

Apple Mail (macOS / iOS)

- Responsive layout worked
- Radio tabs worked
- Keyframe animation worked
- Hover effects worked

Outlook (Desktop/Web)

- Basic layout rendered
- Media queries worked
- Radio tabs not supported
- Animation not supported

Streaming Gaming Work/Study

Smooth 4K streaming + fewer drops during peak hours. Perfect for movie nights and smart TVs.

Lower lag for competitive play and stable connections for party chat and updates.

Reliable video meetings and faster uploads for assignments and projects—no more “Can you hear me?”

Note: Interactivity varies by email client.

Conclusion

The email renders correctly across all clients in terms of structure and readability. However, advanced CSS features such as radio-button interactivity and keyframe animation are only supported in Apple Mail. Gmail and Outlook restrict modern CSS, so fallback content is necessary to maintain usability.
